Reason of visit

Heart attack

Active problems

Observation	Status	Severity	Description	Date from
Functional limitation	active	High	In the morning heavy Mr. Sparrow pain in his chest, emissive to left shoulder, arm, throat, and jaw. He called the emergency service, the ambulance made an ECG and found a ST depression. The EMS applied two passe sof Nitro Sublingual spary and the pain relieves. ECG in ER was more or less NAD. For further finding we housed Mr. Sparrow. We found in the Echocardiographie a dilatated heart, the auscultation led to the same conclusion. The plain CP X-ray showed a dilatated heart aswell, lungs, spine and ribs are NAD. The laboratory showed an elevation in triglyceride (220mg/dl) and Hb-A1c (14%), the other values were NAD.	27/10/2008

Resolved problems

Observation type	Status	Severity	Description	Date from	Date to
Finding	completed	Moderate	We suggest to do a long term setting of the blood pressure. Further finding in coronary circulation should be done, probably with a Thallium Scan, and Sent-Operation should be kept in mind	03/11/2008	03/11/2008

Discharge diagnosis

Diagnosis	Priority	Description	Date from	Date to
Essential (primary) hypertension	Secondary		27/10/2008	
Dilatation of left ventricle	Primary		27/10/2008	
relative coronary Hypoxia	Secondary		27/10/2008	

Discharge / TTO Medication

Name	Frequency	Dose	Unit	RouteCode	Description	Date From	Date To
Nitrolingual 0,4mg 0,4 MG	1 times per Day	0.4	MG	Apply to mouth	For use in Emergency	03/11/2008	

Hospital course

Mr Sparrow enhances very well after the treatment of the Emergency Ambulance and of the ER. In further findings his problems could be ffound and a way for solving them is prepared. His GP will do the further progress in preparing the patient in this all day life.
